## Risk Adjustment

## RESOURCE GUIDE

## About This Guide

This Resource Guide is intended to help Medicare Advantage Organizations (MAOs), providers, physicians, and third party submitters locate information specific to risk adjustment.

The purpose of this Resource Guide is to identify and supply resources that will simplify and clarify both the terminology and the processes employed in the risk adjustment process. An emphasis is given to recent, policyrelevant material.

This Resource Guide is a helpful tool for those who need a quick reference for technical concepts, or for those who need to provide employees with an introductory presentation to the risk adjustment process. Where possible and appropriate, "screen shots" of important resources on the Internet have been included. These pages may also be utilized as a suitable visual aid for risk adjustment instructors to enhance their presentations.

1 Includes Type I or Type II Diabetes Mellitus.
2 Beneficiaries with the three-way interaction RF*CHF*DM are excluded from the two-way interactions $\mathrm{DM}^{*} \mathrm{CHF}$ and $\mathrm{RF} * \mathrm{CHF}$. Thus, the three-way interaction term RF*CHF*DM is not additive to the two-way interaction terms DM*CHF and RF*CHF. Rather, it is hierarchical to, and excludes these interaction terms. A beneficiary with all three conditions is not "credited" with the two-way interactions. All other interaction terms are additive.
3 HCC or disease interaction excluded from institutional model because estimated coefficient less than 0 or $t$-statistic less than 1.0 .

The 2007 denominator of $\$ 7,463.14$ used to calculate both the community and institutional factors is the national predicted average annual cost under the model.

DM is diabetes mellitus (HCCs 15-19).
CHF is congestive heart failure (HCC 80).
COPD is chronic obstructive pulmonary disease (HCC 108).
CVD is cerebrovascular disease (HCCs 95, 96, 100, and 101).
CAD is coronary artery disease (HCCs 81-83).
RF is renal failure (HCC 131).

## NOTES

1. The relative risk scores in this table were calculated by dividing the parameter estimates by the Part C national average predicted expenditures (CMS Part C Denominator). The Part C Denominator value used is $\$ 8,034.71$.
2. The relative factor for HCC 160 is based on pressure ulcer, any stage, for all anatomical sites codes. The relative factor for HCC 160 is also assigned to HCCs 157,158 , and 159 in the constrained regression because the ICD9 codes for the stages of pressure ulcers are not implemented until FY09.
In the -disease interactions, $\|$ the variables are defined as follows:
Artificial Openings for Feeding or Elimination = HCC 188.
Aspiration and Specified Bacterial Pneumonias $=$ HCC 114
Bone/Joint/Muscle Infections/Necrosis = HCC 39.
Cancer $=$ HCCs 8-12.
Cardiorespiratory Failure $=$ HCCs 82-84.

NOTES:

1. The coefficients estimated for this model are the Functioning Graft add-on factors for being in a month after the 3 months accounted for in the Transplant segment of the ESRD system. Early months post-transplant incur higher Medicare spending than later months. The model differentiates the six months, months 4-9, from months further from the transplant period.
2. Originally disabled terms refer to people originally entitled to Medicare for reasons of disability other than ESRD.
3. The Denominator used to calculate the relative factors is $\$ 8,034.71$.

In the "Disease interactions" and "NonAged interactions", the variables are defined as follows:
Sepsis $=$ HCC 2 .
Cardiorespiratory Failure $=$ HCCs 82-84.
Diabetes $=$ HCCs 17, 18, 19.
Congestive Heart Failure $=$ HCC 85.
Chronic Obstructive Pulmonary Disease $=$ HCCs 110-111.
Pressure Ulcer $=$ HCCs 157-160.
Artificial Openings for Feeding or Elimination $=$ HCC 188.
Aspiration and Specified Bacterial Pneumonias $=$ HCC 114.
Schizophrenia = HCC 57.
Seizure Disorders and Convulsions $=$ HCC 79 .
Chronic Ulcer of Skin, except Pressure $=$ HCC 161.
Bone/Joint/Muscle Infections/Necrosis = HCC 39.
Multiple Sclerosis = HCC 77.
Opportunistic Infections $=$ HCC 6 .

## NOTES:

1. For payment purposes, a new enrollee is a beneficiary who did not have 12 months of Part $B$ eligibility in the data collection year. CMS-HCC new enrollee models are not based on diagnoses, but include factors for different age and gender combinations by Medicaid and the original reason for Medicare entitlement.
2. The 2011 denominator of $\$ 9,004.65$ used to calculate the new enrollee factors is the national predicted average annual cost under the model.
