

RESOURCE GUIDE

About this Guide

This Resource Guide is intended to help Medicare+Choice organizations, providers, physicians, and third party submitters locate information specific to risk adjustment.

The purpose of this Resource Guide is to identify and supply resources that will simplify and clarify both the terminology and the processes employed in the submission of risk adjustment data. An emphasis is given to recent, policy-relevant material.

This Resource Guide is a helpful tool for those who need a quick reference for technical concepts, or for those who need to provide employees with an introductory presentation to the risk adjustment data process. Where possible and appropriate, "screen shots" of important resources on the Internet have been included. These pages may also be utilized as a suitable visual aid for risk adjustment data instructors to enhance their presentation.

The information listed in the Resource Guide is arranged in seven sections:

- RISK ADJUSTMENT ACRONYMS AND TERMS
- CODING RESOURCES
- CMS WEB RESOURCES
- CMS REFERENCE DOCUMENTS
- CSSC WEB RESOURCES
- CSSC REFERENCE DOCUMENTS
- RISK ADJUSTMENT PROCESSING SYSTEM CROSSWALKS
- MEDICARE BENEFICIARY DATABASE USER'S MANUAL AND APPLICATION FOR ACCESS

NEOPLASM GUIDELINES

- A. If the treatment is directed at the malignancy, designate the malignancy as the principal diagnosis.
- B. When a patient is admitted because of a primary neoplasm with metastasis and treatment is directed toward the secondary site only, the secondary neoplasm is designated as the principal diagnosis even though the primary malignancy is still present.
- C. Coding and sequencing of complications associated with the malignant neoplasm or with the therapy thereof are subject to the following guidelines:
 - 1. When admission/encounter is for management of an anemia associated with the malignancy, and the treatment is only for anemia, the anemia is designated as the principal diagnosis and is followed by the appropriate code(s) for the malignancy.
 - 2. When the admission/encounter is for management of an anemia associated with chemotherapy or radiotherapy and the only treatment is for the anemia; the anemia is sequenced first followed by the appropriate code(s) for the malignancy.
 - 3. When the admission/encounter is for management of dehydration due to the malignancy or the therapy, or a combination of both, and only the dehydration is being treated (intravenous rehydration), the dehydration is sequenced first, followed by the code(s) for the malignancy.
 - 4. When the admission/encounter is for treatment of a complication resulting from a surgical procedure performed for the treatment of an intestinal malignancy, designate the complication as the principal or first-listed diagnosis if treatment is directed at resolving the complication.
- D. When a primary malignancy has been previously excised or eradicated from its site and there is no further treatment directed to that site and there is no evidence of any existing primary malignancy, a code from category V10, Personal history of malignant neoplasm, should be used to indicate the former site of the malignancy. Any mention of extension, invasion, or metastasis to another site is coded as a secondary malignant neoplasm to that site. The secondary site may be the principal or first-listed with the V10 code used as a secondary code.
- E. Admissions/Encounters involving chemotherapy and radiation therapy.
 - 1. When an episode of care involves the surgical removal of a neoplasm, primary or secondary site, followed by chemotherapy or radiation treatment, the neoplasm code should be assigned as principal or first-listed diagnosis. When an episode of inpatient care involves surgical removal of a primary site or secondary site malignancy followed by adjunct chemotherapy or radiotherapy, code the malignancy as the principal or first-listed diagnosis, using codes in the 140-198 series or where appropriate in the 200-203 series.
 - 2. If a patient admission/encounter is solely for the administration of chemotherapy or radiation therapy code V58.0, Encounter for radiation therapy, or V58.1, Encounter for chemotherapy, should be the first-listed or principal diagnosis. If a patient receives both chemotherapy and radiation therapy both codes should be listed, in either order of sequence.
 - 3. When a patient is admitted for the purpose of radiotherapy or chemotherapy and develops complications such as uncontrolled nausea and vomiting or dehydration, the principal or first-listed diagnosis is V58.0, Encounter for radiotherapy, or V58.1, Encounter for chemotherapy.
- F. When the reason for admission/encounter is to determine the extent of the malignancy, or for a procedure such as paracentesis or thoracentesis, the primary malignancy or appropriate metastatic site is designated as the principal or first-listed diagnosis, even though chemotherapy or radiotherapy is administered.
- G. Symptoms, signs, and ill-defined conditions listed in Chapter 16 characteristic of, or associated with, an existing primary or secondary site malignancy cannot be used to replace the malignancy as principal or first-listed diagnosis, regardless of the number of admissions or encounters for treatment and care of the neoplasm.

Health Plan Management System (HPMS)

HPMS is a CMS information system created specifically for the Medicare+Choice program that provides M+C organization level information.

Accessing HPMS

- Access to HPMS is accomplished via the Medicare Data Communications Network (MDCN).
- A User ID is required for HPMS access. If you do not currently have access, complete the "Access to CMS Computer Systems" form available at <http://cms.hhs.gov/mdcn/hdcidform.asp>.
- If M+C organizations experience difficulty logging into HPMS, please contact Don Freeburger (dfreeburger@cms.hhs.gov) 410-786-4586 or Neetu Balani (nbalani@cms.hhs.gov) 410-786-2548.

FINAL INSTRUCTIONS AS THEY APPEAR IN THE RENEWAL AND NONRENEWAL INSTRUCTIONS FOR THE 2003 CONTRACT YEAR FOR MEDICARE+CHOICE ORGANIZATIONS (dated 05/03/02)
(<http://www.cms.hhs.gov/healthplans/letters/default.asp>)

Instructions for Risk Adjustment Implementation

Background

The Balanced Budget Act of 1997 gave the Secretary of Health and Human Services the authority to collect inpatient hospital data for discharges on or after July 1, 1997. CMS implemented the Principal Inpatient - Diagnostic Cost Group (PIP-DCG) risk adjustment method based on the principal inpatient hospital discharge diagnosis. The encounter data collection was expanded in 2000-2001 to include physician and hospital outpatient data. In May 2001, the Secretary announced a suspension of the requirements for filing physician and hospital outpatient encounter data collection pending a review of the administrative burden that was associated with that effort. As a direct result of that review, including consultation with M+C organizations, these instructions implement a streamlined process for M+C organizations to collect and submit data for risk adjustment, balancing burden reduction with improved payment accuracy.

Effective Dates

These instructions are effective for all risk adjustment data submitted for dates of service on or after July 1, 2002. Data from that date forward must be submitted for relevant diagnoses noted during hospital inpatient stays and hospital outpatient and physician visits. M+C organizations may begin submitting data on October 1, 2002 and must meet their first quarterly submission requirement by December 31, 2002. In addition, these instructions provide the guidelines for submitting 2003 reconciliation data for the PIP-DCG model after October 1, 2002.

Reporting

The requirements as described herein shall apply to all M+C organizations, the Program of All-Inclusive Care for the Elderly (PACE) and all active capitated demonstrations except United Mine Workers Association (UMWA) and the Department of Defense (DOD) Tricare. Additional data requirements may be required for demonstrations at the time of their renewal, typically under the "Special Terms and Conditions" section of their waiver.

Provider Type Definitions

The following sections define the provider types from which M+C organizations may submit diagnoses. Any diagnoses received from the provider types as defined may be submitted. For information on the minimum requirements for diagnosis submission, see the data submission instructions below. The provider types and their respective codes are hospital inpatient, which is further subdivided into principal hospital inpatient (01) and other hospital inpatient (02); hospital outpatient (10); and physician (20).

Hospital Inpatient Data

Inpatient hospital data should be differentiated based on whether it is received from within or outside of the M+C organization's provider network. Because the Code of Federal Regulations (CFR) requires that all M+C organization network hospitals have a Medicare provider agreement (see 42CFR422.204(a)3(i)), by extension, a network provider should have a Medicare provider billing number for a hospital inpatient facility. If a facility does not have a hospital inpatient Medicare provider number, the M+C organization

shall not submit diagnoses from that facility as hospital inpatient data. Table 1, at the end of these instructions, gives the list of valid provider number ranges for hospital inpatient facilities. Please note that it is not necessary for M+C organizations to receive the Medicare provider number from the hospital on incoming transactions, i.e., the M+C organization may utilize its own provider identifications system. Regardless of how M+C organizations identify their facilities, M+C organizations must be able to distinguish diagnoses submitted by facilities that qualify as Medicare hospital inpatient facilities from diagnoses submitted by non-qualifying facilities.

For diagnoses received from non-network facilities, the M+C organization should first check whether the hospital is a Medicare-certified hospital inpatient facility. If the provider is a Medicare-certified hospital inpatient facility, the M+C organization should submit the diagnoses from this facility. If the hospital is not Medicare certified but is a Department of Veterans Affairs (VA) or DOD facility, the M+C organization must verify that it is a legitimate inpatient facility by contacting the Customer Service and Support Center (CSSC) prior to submitting data from that facility. If the hospital is not Medicare certified or VA/DOD, the M+C organization should contact CMS to verify that the facility qualifies as a hospital inpatient facility prior to submitting any diagnoses from that facility.

To aid in determining whether or not a provider is a Medicare-certified hospital inpatient facility, the M+C organization may refer to the Medicare provider number. The Medicare provider number has a two-digit state code followed by four digits that identify the type of provider and the specific provider number. Table 1 outlines the number ranges for all facility types that CMS considers to be Medicare hospital inpatient facilities. The XX in the first two positions of every number represents the state code. If the facility's Medicare provider number is unknown, the M+C organization may verify the provider number with the facility's billing department.

Some hospitals also operate Skilled Nursing Facilities (SNFs) as separate components within the hospital or have components with "swing beds" that can be used for either hospital inpatient or SNF stays. M+C organizations shall not submit any diagnoses for stays in the SNF component of a hospital or from swing bed stays when the swing beds were utilized as SNF beds. Stays in both of these circumstances qualify as SNF stays and do not qualify as hospital inpatient stays. If the Medicare provider number is on the incoming transaction from the facility, the M+C organization may distinguish the SNF or SNF swing-bed stays by the presence of a U, W, Y or Z in the third position of the Medicare provider number (e.g., 11U001).

Principal Hospital Inpatient and Other Hospital Inpatient Diagnoses

M+C organizations must differentiate between the principal hospital inpatient diagnosis and all other hospital inpatient diagnoses when coding the provider type on the new risk adjustment transaction. According to the Official ICD-9 CM Guidelines for Coding and Reporting, the principal diagnosis is defined in the Uniform Hospital Discharge Data Set (UHDDS) as "that condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care". The principal diagnosis as reported by the hospital shall be coded as Provider Type 01, Principal Hospital Inpatient. CMS strongly recommends that M+C organizations continue to collect electronic encounter data or claims from hospital inpatient stays to ensure the proper identification of the principal diagnosis.

The remaining diagnoses from a hospital inpatient stay shall be coded as Provider Type 02, Other Hospital Inpatient. The guidance for coding other conditions appears in Official ICD-9 CM Guidelines for Coding and Reporting, as well as in the section of these instructions titled Coexisting Conditions.

Outpatient Hospital Data

Hospital outpatient data includes any diagnoses from a hospital outpatient department, excluding diagnoses that are derived only from claims or encounters for laboratory services, ambulance, or durable medical equipment, prosthetics, orthotics, and supplies. Hospital outpatient departments include all provider types listed on Table 2 at the end of these instructions. Along with the provider types in the table, Table 2 also lists the valid Medicare provider number ranges for those provider types. The XX in the first two positions of every range represents the state code component of the Medicare provider number.

Because Medicare has multiple number ranges for many provider types, and continuous number ranges feature multiple provider types, a simplified list with the continuous valid Medicare provider number ranges for hospital outpatient facilities is provided in Table 3. CMS has included Federally Qualified Health Centers, Community Mental Health Centers, and Rural Health clinics in the list of outpatient facilities to ensure M+C organizations are allowed to submit complete physician data. These three facility

types utilize a composite bill that covers both the physician and the facility component of the services, and services rendered in these facilities do not result in an independent physician claim.

M+C organizations should determine which providers qualify as hospital outpatient facilities in a similar manner as they determine which providers qualify as hospital inpatient facilities. As with hospital inpatient data, diagnoses collected from network providers are differentiated from diagnoses collected from non-network providers. Because all M+C organization network hospitals must have a provider agreement, all network hospital outpatient facilities must have a Medicare provider number within the range of valid hospital outpatient provider numbers (see Table 3 below). If a facility does not have a hospital outpatient Medicare provider number, the M+C organization shall not submit diagnoses from that facility as hospital outpatient data. It is not necessary that M+C organizations receive the Medicare provider number on incoming risk adjustment transactions, even if the transactions are electronic encounters or claims. However, M+C organizations must be able to distinguish diagnoses submitted by providers that qualify as hospital outpatient facilities from diagnoses submitted by non-qualifying providers.

For diagnoses received from non-network facilities, the M+C organization should first check whether the hospital is a Medicare-certified hospital outpatient facility. If the provider is a Medicare-certified hospital outpatient facility, the M+C organization should submit the diagnoses from this facility. If the hospital is not Medicare certified but is a VA or DOD facility, the M+C organization must verify that it is a legitimate outpatient facility by contacting the CSSC prior to submitting data from that facility. If the hospital is not Medicare certified or VA/DOD, the M+C organization should contact CMS to verify that the facility qualifies as a hospital outpatient facility prior to submitting any diagnoses from that facility.

As with hospital inpatient facilities, if the facility's Medicare provider number is unknown, the M+C organization may verify the provider number by contacting facility's billing department.

Physician Data

For purposes of risk adjustment data, physicians are defined by the specialty list in Table 4. This list includes certain non-physician practitioners, who for purposes of risk adjustment data will be covered under the broad definition of physicians. This list also includes multi-specialty groups and clinics. This inclusion is solely intended to allow M+C organizations to submit data based on claims received from groups and clinics that bill M+C organizations on behalf of individual practitioners covered on the specialty list.

Physician risk adjustment data is defined as diagnoses that are noted as a result of a face-to-face visit by a patient to a physician (as defined above) for medical services. Pathology and radiology services represent the only allowable exceptions to the face-to-face visit requirement, since pathologists do not routinely see patients and radiologists are not required to see patients to perform their services. Medicare fee-for-service coverage and payment rules do not apply to risk adjustment data; therefore, M+C organizations may submit diagnoses noted by a physician even when the services rendered on the visit are not Medicare-covered services. The diagnoses should be coded in accordance with the diagnosis coding guidelines in these instructions.

Data Collection

M+C organizations have several options for collecting data to support the risk adjustment submission. When M+C organizations collect data from providers, they may choose to utilize: 1) the standard claim or encounter formats, 2) a superbill, or 3) the minimum data set, i.e., the format used to report risk adjustment data to CMS.

Standard claim and encounter formats currently include the UB-92, the National Standard Format (NSF), and ANSI X12 837. All M+C organizations that collect electronic fee-for-service claim or no-pay encounters from their provider networks shall utilize the data from these transactions to prepare their risk adjustment data submissions. M+C organizations with capitated or mixed networks may also choose to use an electronic claim or encounter format to collect risk adjustment data from their capitated providers.

When Health Insurance Portability and Accountability Act (HIPAA) transaction standards become mandatory, all electronic claims or encounters sent from providers (physicians and hospitals) to health plans (M+C organizations) will constitute HIPAA-covered transactions. Any M+C organization that utilizes an electronic claim or encounter format for their risk adjustment data collection will need to convert to ANSI X12 837 version 40.10 when HIPAA standards become mandatory.

M+C organizations may elect to utilize a superbill or the minimum data set (HIC, diagnosis, "from date," "through date," and provider type) to collect risk adjustment data. Use of a superbill or the minimum data set to collect diagnoses does not violate HIPAA transaction standards, since neither of these data collection methods constitutes a covered transaction, i.e., these transactions are not claims or encounters. However, any M+C organization that utilizes an electronic claim or encounter to collect diagnoses from their providers shall submit the diagnoses collected on those claims and encounters. M+C organizations shall not utilize a superbill or the minimum risk adjustment data set to obtain diagnoses from providers who submit electronic claims or encounters, except when correcting erroneous diagnoses or supplementing incomplete diagnoses.

Regardless of the method(s) that the M+C organization utilizes to collect data from providers, any M+C organization may utilize any submission method accepted by CMS (UB-92, NSF, ANSI, risk adjustment data format, or direct data entry).

Diagnostic Coding

Medicare utilizes ICD-9-CM as the official diagnosis code set for all lines of business. In accordance with this policy, CMS will utilize ICD-9 diagnosis codes in the determination of risk adjustment factors. M+C organizations must submit for each beneficiary all relevant ICD-9 codes that are utilized in the risk adjustment model. M+C organizations must submit each relevant diagnosis at least once during a risk adjustment data reporting period, with the first period being July 1, 2002 – June 30, 2003. Future risk adjustment data reporting periods will be announced January 15, 2003.

At a minimum, the submitted ICD-9 codes must be sufficiently specific to allow appropriate grouping of the diagnoses in the risk adjustment model. CMS has provided a list of the minimal ICD-9 codes required to group diagnoses for risk adjustment. In all cases, coding to the highest degree of specificity provides the most accurate coding and ensures appropriate grouping in the risk adjustment model. For the complete list of diagnoses used in the risk adjustment model, as well as the list of diagnoses with the minimum specificity required to group for the model, see web links at the end of these instructions.

M+C organizations must apply the following guidelines when collecting data from their provider networks. If the M+C organization utilizes an abbreviated method of collecting diagnoses, such as a superbill, the diagnoses may be coded to the highest level of specificity or to the level of specificity necessary to group the diagnosis appropriately for risk adjusted payments. If the M+C organization collects data using an encounter or claim format, the codes should already be at the highest level of specificity. CMS encourages M+C organizations to utilize the full level of specificity in submitting risk adjustment data. Regardless of the level of specificity of submitted diagnoses, a medical record must substantiate all diagnostic information provided to CMS.

The Official ICD-9 CM Guidelines for Coding and Reporting (see web links at end of instructions) provides guidance on diagnosis coding. This document provides guidelines for hospital inpatient, hospital outpatient and physician services.

ICD-9-CM codes are updated on an annual basis. Physicians and providers must begin using the ICD-9-CM codes as updated in October 2001 for risk adjustment data submitted on or after July 1, 2002. It is very important that physicians and providers use the most recent version of the ICD-9-CM coding book. Failure to use the proper codes will result in diagnoses being rejected in the Risk Adjustment Processing System. Information regarding ICD-9-CM codes is available on the Internet at <http://cms.hhs.gov>.

Coexisting Conditions

Physicians and providers should use the Official ICD –9-CM Guidelines for Coding and Reporting and Medicare fee-for-service rules when submitting risk adjustment data to M+C organizations. The official guidelines that govern those coexisting conditions that may be coded and reported by hospital inpatient, hospital outpatient and physician providers are summarized below. The guidelines for inpatient hospital stays are as follows:

“...all conditions that coexist at the time of admission, that develop subsequently, or that affect the treatment received and/or length of stay. Diagnoses that relate to an earlier episode which have no bearing on the current hospital stay are to be excluded.”

The guidelines for coexisting conditions that should be coded for hospital outpatient and physician services are as follows:

“Code all documented conditions that coexist at time of the encounter/visit, and require or affect patient care treatment or management. Do not code conditions that were previously treated and no longer exist. However, history codes (V10-V19) may be used as secondary codes if the historical condition or family history has an impact on current care or influences treatment.”

Physicians and hospital outpatient departments shall not code diagnoses documented as “probable”, “suspected”, “questionable”, “rule out”, or “working” diagnosis. Rather, physicians and hospital outpatient departments shall code the condition(s) to the highest degree of certainty for that encounter/visit, such as symptoms, signs, abnormal test results, or other reason for the visit.

Alternative Data Sources (ADS)

Alternative data sources include diagnostic data from sources other than inpatient hospital, outpatient hospital, and physician services. M+C organizations may use ADS as a check to ensure that all required diagnoses have been submitted to CMS for risk adjustment purposes. Two examples of ADS include pharmacy records and information provided to national or state cancer registries.

Note that M+C organizations may not utilize ADS as an alternative to diagnoses from a provider. If M+C organizations elect to utilize one or more ADS, they must ensure that the diagnosis reported to CMS is recorded in the beneficiary’s medical record for the data collection period or that the medical record documents the clinical evidence of that specific diagnosis for the data collection period.

For example, prescription of an ACE inhibitor, alone, would not be considered as sufficient the sole data source of “clinical evidence” of CHF; instead the medical record would need to document an appropriate clinician’s diagnosis of congestive heart failure during the data collection period (e.g., where an “appropriate clinician” is a physician/nurse practitioner/physician assistant). A laboratory test showing one reading of high blood sugar would also not be considered to be sufficient “clinical evidence” of diabetes--the medical record would need to document a clinician’s diagnosis of diabetes during the data collection period.

Diagnosis Submission

For each enrolled beneficiary, M+C organizations shall submit each relevant diagnosis at least once during a data collection period. A relevant diagnosis is one that meets three criteria:

- 1) the diagnosis is utilized in the model;
- 2) the diagnosis was received from one of the three provider types covered by the risk adjustment requirements; and
- 3) the diagnosis was collected according to the risk adjustment data collection instructions.

M+C organizations may elect to submit a diagnosis more than once during a data collection period for any given beneficiary, as long as that diagnosis was recorded based on a visit to one of the three provider types covered by the risk adjustment data collection requirements. The first data collection period will cover all diagnoses submitted for dates of service from July 1, 2002 through June 30, 2003.

CMS will utilize the “through date” of a particular diagnosis when determining the “date of service” for purposes of risk adjustment; i.e., all diagnoses that have a “through date” that falls within the data collection year will be utilized in the risk adjustment model. For hospital inpatient diagnoses, the “through date” should be the date of discharge. All hospital inpatient diagnoses shall have a “through date”. For physician and hospital outpatient diagnoses, the “through date” should represent either the

exact date of a patient visit or the last visit date for a series of services. For outpatient and physician diagnoses that correspond to a single date of service, M+C organizations have the option of submitting only the "from date", leaving the "through date" blank. When a M+C organization submits a "from date" and no "through date", the Risk Adjustment Processing System (RAPS) will automatically copy the "from date" into the "through date" field. The returned file, provided to the M+C organization, will contain both a "from date" and "through date" for every diagnosis.

Date Span

Date span is the number of days between the "from date" and "through date" on a diagnosis. For inpatient diagnoses, the "from date" and "through date" should always represent the admission and discharge dates respectively. Therefore, the date span should never be greater than the length of the inpatient stay. For physician and hospital outpatient data, the date span shall not exceed 30 days.

Submission Frequency

M+C organizations shall submit at least once per calendar quarter. Each quarter's submission should represent approximately one quarter of the data that the M+C organization will submit over the course of the year. The amount of records and diagnoses to which this corresponds depends upon the type of submission a M+C organization selects. If a M+C organization elects to use a claim or encounter submission, the ratio of records and diagnoses to enrollees will be much higher than if a M+C organization elects to use a quarterly summary transaction.

CMS will monitor submissions to ensure that all M+C organizations meet the quarterly submission requirements. For M+C organizations that do not receive a regular submission of superbills, claims, or encounter data from their providers, CMS strongly recommends that these organizations request new diagnoses from all network providers on a quarterly basis at a minimum to ensure accurate, complete and timely data submission.

Submission Methods

Data submission to CMS may be accomplished through any of the following methods:

- 1) full or abbreviated UB-92 Version 6.0;
- 2) full or abbreviated National Standard Format (NSF) Version 3.1;
- 3) ANSI X12 837 Version 30.51 (only for those submitters currently utilizing this version);
- 4) ANSI X12 837 Version 40.10;
- 5) the new RAPS format; and
- 6) on-line direct data entry (DDE) available through Palmetto Government Benefits Administrators.

Regardless of the method of submission that a M+C organization selects, all transactions will be subject to the same edits. The Front-End Risk Adjustment System (FERAS) will automatically format all DDE transactions in the RAPS format. Transactions that are submitted in claim or encounter formats will be converted to the RAPS format prior to going through any editing. The mapping from each claim or encounter transaction to the RAPS format is on the CSSC web site at www.mcoservice.com.

Each M+C organization should select the most efficient method for data submission, taking into account the unique nature of its data systems. M+C organizations may elect to utilize more than one submission method. All transactions will be submitted using the same network connectivity that M+C organizations currently utilize for encounter data submission. For assistance in utilizing any of the submission methods, please contact the Customer Service and Support Center (CSSC) at 1-877-534-2772.

Deleting Diagnoses

The RAPS will not perform adjustment processing. In place of the current adjustment process, there will be a diagnosis delete function available that will serve the same purpose. Each diagnosis cluster (diagnosis code, from and "through date"s, and provider type) will be stored separately as a unique cluster associated with a person's HIC number. If a diagnosis was submitted in error and needs to be corrected, the original diagnosis cluster must be resubmitted with a delete indicator in the appropriate field. The correct diagnosis may be sent as a normal transaction. Delete transactions may only be submitted using the RAPS format or the DDE function. When a delete record is received, CMS will maintain the original diagnosis cluster on file and add to it a delete indicator and the date of the deletion.

2003 Hospital Inpatient Data

M+C organizations should submit as much 2003 data as possible through the existing encounter data processing system. 2003 data is defined as hospital inpatient data for dates of discharge from July 1, 2001 through June 30, 2002. Any data submitted on or before September 27, 2002 will be processed through the existing systems and will be reported back to the M+C organizations in the existing report formats. This includes all data that is submitted in September 2002 and finalized in October 2002. Please note that the deadline for submitting data for 2003 risk adjustment is September 6, 2002, and the 2002 reconciliation data submission deadline will be September 27, 2002.

M+C organizations may submit reconciliation data for 2003 after the October 1, 2002 implementation of RAPS. Reconciliation data will be run through the PIP-DCG model. All reconciliation data must be submitted utilizing a full UB-92, the encounter version of the UB-92, or the ANSI X12 837 to ensure the accuracy of the PIP-DCG model. M+C organizations should submit only the 111 or 11Z bill types. The data will be converted at the FERAS into the RAPS format and sent through the normal RAPS processing. The returned report will be in the RAPS format, rather than the encounter data report formats. The transaction will be stored as one set of diagnosis clusters to maintain the integrity of the original transaction.

M+C organizations shall not submit adjustment transactions for 2003 reconciliation data after October 1, 2002. Any data submitted after that date should be submitted as a 111 or 11Z bill type. When M+C organizations need to correct a previously submitted transaction, M+C organizations shall send a new 111 or 11Z with the corrected information. In the same manner as CMS handled the original abbreviated hospital inpatient encounter data, CMS will check the from and "through dates" to identify duplicate inpatient transactions, determine which of the duplicate transactions was submitted most recently, and utilize the most recent transaction for calculating the risk adjustment factor.

Electronic Data Interchange (EDI) Agreements

All M+C organizations should have EDI agreements on file at Palmetto GBA, the front-end recipient of all encounter data. The language in encounter data EDI agreements has been updated to reflect the change from encounter data submission to risk adjustment data submission. All M+C organizations must complete a new EDI agreement prior to submitting to the new system. This change does not in any way change the network connectivity M+C organizations currently utilize, but merely aligns the language in the agreement with the new data rules.

Use of Third Party Submitters

M+C organizations may continue to utilize third-party vendors to submit risk adjustment data. Regardless who submits the data; CMS holds the M+C organization accountable for the content of the submission.

Data Validation

A sample of risk adjustment data used for making payments may be validated against hospital inpatient, hospital outpatient, and physician medical records to ensure the accuracy of medical information. Risk adjustment data will be validated to the extent that the diagnostic information justifies appropriate payment under the risk adjustment model. M+C organizations will be provided with additional information as the process for these reviews is developed.

M+C organizations must submit risk adjustment data that are substantiated by the physician or provider's full medical record. M+C organizations must maintain sufficient information to trace the submitted diagnosis back to the hospital or physician that originally reported the diagnosis. Since M+C organizations may submit summary level transactions without a link to a specific encounter or claim, establishing an appropriate audit trail to the original source of the data requires diligent information management on the part of the M+C organization.

CSSC REFERENCE DOCUMENTS

TO: Managed Care Organizations Submitting Risk Adjustment Data

RE: EDI Enrollment and Submitter Application for Risk Adjustment Data Processing

Welcome to the Customer Service and Support Center (CSSC) for Medicare Managed Care Organizations submitting Risk Adjustment Data. The CSSC and the Front-End Risk Adjustment System (FERAS) look forward to working with you in all aspects of the submission of risk adjustment data.

The following information must be completed and sent to the CSSC for enrollment for the submission of data for Risk Adjustment:

- EDI Agreement for Risk Adjustment Data collection
- Submitter Application
- Risk Adjustment NDM Specifications (For NDM users only)

Please note the following for submitting Risk Adjustment Data:

- A CMS Risk Adjustment Data EDI Agreement must be completed by each submitter and on file with CSSC, prior to submitting Risk Adjustment Data. The agreement must be signed by an authorized agent of the organization and returned to CSSC Operations at the address provided.
- **Use of Third Party Submitters:** If the submitter will be an entity other than an M+C organization, the Submitter must complete the Submitter ID Application form and the M+C organization must complete the EDI Agreement. This EDI Agreement must be completed, signed and returned for each Plan number submitting data. Regardless who submits the data, CMS holds the M+C organization accountable for the content of the submission.
- A Submitter ID (SHnnnn) will be assigned to you by the CSSC and will remain effective for ongoing submission of risk adjustment data. This is the unique ID assigned to the Plan or entity that will submit data and retrieve reports. Please complete the Submitter Application return it to CSSC Operations with the completed EDI Agreement.
- You will be submitting all Risk Adjustment Data to the FERAS. Data may be submitted in one of the following formats, RAPS format, UB92, NSF and/or ANSI. All data submitted to the front-end will be sent to the Risk Adjustment Processing System (RAPS) in the risk adjustment data layout.
- If you are submitting the UB92, NSF or ANSI file format, it will be necessary to identify to the front-end the data is being submitted for translation to the RAPS format using the appropriate receiver ID as designated below:
 - UB 92 - Institutional Data - 80884 (RT01-6)
 - NSF - Professional Data - 80883 (AA0-17.0)
 - ANSI 4010 Institutional (80884) and Professional (80883) - ISA08, GS03, NM109 1000B

- Datasets are required to be set up for NDM users. The Risk Adjustment NDM Specifications should be completed and returned to the CSSC with the Submitter Application and the EDI Agreement.
- Technical Specifications are available based on the communication medium that is currently in use. NDM instructions and the FERAS User Guide are available on the mcoservice.com web site. Testing instructions for each medium are included within the document.
- On-Line transaction data entry is available through the secure MDCN FERAS web site. This option allows the user to key risk adjustment data directly into the front-end, creating the file for direct data submission.
- Reports are returned on all data submitted. The following report files are available for data submitted:
 - Response report generated by FERAS - per file submission
 - FERAS Response Report - RSP#####.RSP.FERAS_RESP
 - RAPS – CMS generated reports per file submission
 - RAPS Return File – RPT#####.RPT.RAPS_RETURN_FLAT
 - RAPS Error Report – RPT#####.RPT.RAPS_ERROR_RPT
 - RAPS Transaction Summary Report – RPT#####.RPT.RAPS_SUMMARY
 - RAPS - CMS generated reports monthly
 - RAPS Monthly Plan Activity Report – RPT#####.RPT.RAPS_MONTHLY
 - RAPS Cumulative Plan Activity Report – RPT#####.RPT.RAPS_CUMULATIVE

All reference material is available on the www.mcoservice.com web site. We encourage you to visit the site and register for e-mail notification of all updates. Please contact the CSSC Help Line with any questions regarding the information provided.

**Medicare+Choice Organization
Electronic Data Interchange Enrollment Form**

MANAGED CARE ELECTRONIC DATA INTERCHANGE (EDI) ENROLLMENT FORM

ONLY for the Collection of Risk Adjustment Data and/or
With Medicare+Choice Eligible Organizations

The eligible organization agrees to the following provisions for submitting Medicare risk adjustment data electronically to The Centers for Medicare & Medicaid Services (CMS) or to CMS's contractors.

A. The Eligible Organization Agrees:

1. That it will be responsible for all Medicare risk adjustment data submitted to CMS by itself, its employees, or its agents.
2. That it will not disclose any information concerning a Medicare beneficiary to any other person or organization, except CMS and/or its contractors, without the express written permission of the Medicare beneficiary or his/her parent or legal guardian, or where required for the care and treatment of a beneficiary who is unable to provide written consent, or to bill insurance primary or supplementary to Medicare, or as required by State or Federal law.
3. That it will ensure that every electronic entry can be readily associated and identified with an original source document. Each source document must reflect the following information:
 - Beneficiary's name,
 - Beneficiary's health insurance claim number,
 - Date(s) of service,
 - Diagnosis/nature of illness
4. That the Secretary of Health and Human Services or his/her designee and/or the contractor has the right to audit and confirm information submitted by the eligible organization and shall have access to all original source documents and medical records related to the eligible organization's submissions, including the beneficiary's authorization and signature.
5. Based on best knowledge, information, and belief, that it will submit risk adjustment data that are accurate, complete, and truthful.
6. That it will retain all original source documentation and medical records pertaining to any such particular Medicare risk adjustment data for a period of at least 6 years, 3 months after the risk adjustment data is received and processed.
7. That it will affix the CMS-assigned unique identifier number of the eligible organization on each risk adjustment data electronically transmitted to the contractor.
8. That the CMS-assigned unique identifier number constitutes the eligible organization's legal electronic signature.

9. That it will use sufficient security procedures to ensure that all transmissions of documents are authorized and protect all beneficiary-specific data from improper access.
10. That it will establish and maintain procedures and controls so that information concerning Medicare beneficiaries, or any information obtained from CMS or its contractor, shall not be used by agents, officers, or employees of the billing service except as provided by the contractor (in accordance with §1106(a) of the Act).
11. That it will research and correct risk adjustment data discrepancies.
12. That it will notify the contractor or CMS within 2 business days if any transmitted data are received in an unintelligible or garbled form.

B. The Centers for Medicare & Medicaid Services Agrees To:

1. Transmit to the eligible organization an acknowledgment of risk adjustment data receipt.
2. Affix the intermediary/carrier number, as its electronic signature, on each response/report sent to the eligible organization.
3. Ensure that no contractor may require the eligible organization to purchase any or all electronic services from the contractor or from any subsidiary of the contractor or from any company for which the contractor has an interest.
4. The contractor will make alternative means available to any electronic biller to obtain such services.
5. Ensure that all Medicare electronic transmitters have equal access to any services that CMS requires Medicare contractors to make available to eligible organizations or their billing services, regardless of the electronic billing technique or service they choose. Equal access will be granted to any services the contractor sells directly, indirectly, or by arrangement.
6. Notify the provider within 2 business days if any transmitted data are received in an unintelligible or garbled form.

NOTICE:

Federal law shall govern both the interpretation of this document and the appropriate jurisdiction and venue for appealing any final decision made by CMS under this document.

This document shall become effective when signed by the eligible organization. The responsibilities and obligations contained in this document will remain in effect as long as Medicare risk adjustment data are submitted to CMS or the contractor. Either party may terminate this arrangement by giving the other party (30) days written notice of its intent to terminate. In the event that the notice is mailed, the written notice of termination shall be deemed to have been given upon the date of mailing, as established by the postmark or other appropriate evidence of transmittal.

Signature:

I am authorized to sign this document on behalf of the indicated party and I have read and agree to the foregoing provisions and acknowledge same by signing below.

CSSC Risk Adjustment Data Submitter Application

Plan Number (Hnnnn): _____
 Plan Name: _____
 Address: _____
 Fax Number : _____
 Operations Contact Person: _____
 E-Mail address: _____
 Phone Number: _____
 Technical Contact Person: _____
 E-Mail address: _____
 Phone Number: _____

What format do you plan to use to submit Risk Adjustment Data?

- RAPS Format
- M+CO NSF Format
- UB 92 version 6.0
- ANSI 837 4010

What Connection Type is established via the Medicare Data Communications Network (MDCN)?

Lease Line _____
 IP _____
 NDM _____
 Dial up / Modem _____

Please list any additional Plan numbers your organization will submit data for:

Plan _____ Plan _____ Plan _____
 Plan _____ Plan _____ Plan _____
 Plan _____ Plan _____ Plan _____

Please return the completed submitter application, EDI Agreement and NDM specifications to CSSC Operations at the address below.

1-877-534-CSSC
 www.mcoservice.com
 FAX: 1-803-935-0171

Risk Adjustment NDM Specifications

The NDM Node connection is defined as follows:

NET ID: SCA
NODE ID: A70NDM.MC
APPLID: A70NDMMC
AGNS ID: PGBA

PLEASE ENTER YOUR NDM INFORMATION (Required):

NET ID: _____
NODE ID: _____
APPLID: _____
AGNS ID: _____

Your NDM User ID and password (if datasets are racf protected)

User ID: _____
Password: _____

RAPS Transaction Submission

DSN: **MAB.PROD.NDM.RAPS.PROD.submitter id(+1)**
DISP: (NEW,CATLG,DELETE)
UNIT: SYSDG
SPACE: (CYL,(75,10),RLSE)
DCB: (RECFM=FB,LRECL=512,BLKSIZE=27648)

Note: For testing, use **MAB.PROD.NDM.RAPS.TEST.submitter id(+1)**

Please note that the test/prod indicator in the file, AAA 6, must also indicate "TEST" or "PROD", depending on the type of file being submitted.

Report Retrieval for RAPS Reports

Create the datasets and provide the dataset names below for the RAPS report formats. We will return reports to you in the DSNs identified below. These datasets need to be GDGs to allow multiple files to be sent without manual intervention or overwriting of existing files. The following reports will be returned with each submission.

Front End (FERAS) Response Report

Frequency: Daily

Report **DSN:** _____
DCB=(DSORG=PS,LRECL=133,RECFM=FB,BLKSIZE=27930)

RAPS Return File

Frequency: Daily

Flat **DSN:** _____
DCB=(DSORG=PS,LRECL=512,RECFM=FB,BLKSIZE=27648)

RAPS Error Report

Frequency: Daily

Report **DSN:** _____
DCB=(DSORG=PS,LRECL=133,RECFM=FB,BLKSIZE=27930)

RAPS Transaction Summary Report

Frequency: Weekly

Report **DSN:** _____
DCB=(DSORG=PS,LRECL=133,RECFM=FB,BLKSIZE=27930)

The reports below will be sent on a monthly basis, regardless of submissions.

RAPS Monthly Summary Report

Frequency: Daily

Report **DSN:** _____
DCB=(DSORG=PS,LRECL=133,RECFM=FB,BLKSIZE=27930)

RAPS Monthly Cumulative Report

Frequency: Daily

Report **DSN:** _____
DCB=(DSORG=PS,LRECL=133,RECFM=FB,BLKSIZE=27930)

NOTE: If you submit the UB92, NSF or ANSI file format, you may submit to the DSNs below. However, with these file formats it is necessary to identify to the front-end the data is being submitted for translation to the RAPS format and data for risk adjustment processing by using the appropriate receiver ID as designated below:

Institutional Data, UB 92– 80884 (RT01-6)
Professional Data, NSF– 80883 (AA0-17.0)
Institutional (80884) and Professional (80883)ANSI 4010 –ISA08, GS03, NM109
1000B

NSF Format Submission

DSN: **MAB.PROD.NDM.EDS.CLM.NSF.submitter id(+1)**
DISP: (NEW,CATLG,DELETE)
UNIT: SYSDG
SPACE: (CYL,(75,10),RLSE)
DCB: (RECFM=FB,LRECL=320,BLKSIZE=27840)
Note: For testing, use **MAB.PROD.NDM.EDS.TCLM.NSF. submitter id(+1)**

UB92 Format Submission

DSN: **MAB.PROD.NDM.EDS.CLM.UBF.submitter id(+1)**
DISP: (NEW,CATLG,DELETE)
UNIT: SYSDG
SPACE: (CYL,(75,10),RLSE)
DCB: (RECFM=FB,LRECL=192,BLKSIZE=27840)

Note: For testing, use DSN= MAB.PROD.NDM.EDS.TCLM.UBF. submitter id(+1)

837 Format Submission

DSN: **MAB.PROD.NDM.EDS.CLMA.UBF.submitter (+1)**
DISP: (NEW,CATLG,DELETE)
UNIT: SYSDG
SPACE: (CYL,(75,10),RLSE)
DCB: (RECFM=FB,LRECL=80,BLKSIZE=27920)
Note: For testing, use **MAB.PROD.NDM.EDS.TCLMA.UBF.submitter (+1)**

DSN: **MAB.PROD.NDM.EDS.CLMA.NSF.submitter (+1)**
DISP: (NEW,CATLG,DELETE)
UNIT: SYSDG
SPACE: (CYL,(75,10),RLSE)
DCB: (RECFM=FB,LRECL=80,BLKSIZE=27920)

Note: For testing, use **MAB.PROD.NDM.EDS.TCLMA.NSF.submitter (+1)**

Please note that the test/prod indicator in the file must match the DSN.

HOW TO CALCULATE DEMOGRAPHIC AND CMS-HCC RISK ADJUSTED PAYMENTS

The transition to 100% risk adjusted payment in 2007 requires that a portion of the M+C payment is based on the traditional demographic payment methodology, with the remainder of the payment based on risk adjustment payment methodology. For 2004 payment, the payment blend is 70% demographic and 30% CMS-HCC risk adjusted.

The web address <http://cms.hhs.gov/healthplans/rates/> provides all the information necessary for the following calculations.

 **Example: Calculate the CY 2004 M+C payment for a 72 year-old female living in Howard County, Maryland, living in the community (non-institutionalized), who was originally entitled to Medicare due to disability. She is not entitled to Medicaid (no expenditure increment).**

She has several diagnoses during the data collection period:

- **Diabetes with Acute Complications (HCC 17)**
- **Diabetes without Complications (HCC 19)**
- **Pneumococcal Pneumonia (HCC 112)**

STEP 1—CALCULATE DEMOGRAPHIC PAYMENT AT 70% FOR 2004

- Go to <http://cms.hhs.gov/healthplans/rates/> and find the Part A and Part B “M+C Monthly Capitation Rates” for a beneficiary living in Howard County, Maryland.
 - Monthly “aged” rate book amounts for Howard County, Maryland
 - Part A aged rate = \$348.93
 - Part B aged rate = \$281.71
- Go to <http://cms.hhs.gov/healthplans/rates/> and find the “Demographic Cost Factors for 1997-2004” for a 72 year-old female, non-institutionalized, non-Medicaid.
 - Part A = .70
 - Part B = .85
- Multiply the demographic cost factor for Part A and Part B by the corresponding Part A and Part B county rate amount, then add the Part A and Part B amounts together.
 - Part A = $\$348.93 \times .70 = \244.25
 - Part B = $\$281.71 \times .85 = \239.45
 - $\$244.25 + \$239.45 = \mathbf{\$483.70}$
- Multiply the total amount by the 2004 demographic payment percentage (70%).
 - $\$483.70 \times .70 = \mathbf{\$338.59}$

The product of \$338.59 is the 2004 demographic payment amount for the beneficiary.

STEP 2—CALCULATE RISK ADJUSTED PAYMENT AT 30% FOR 2004

- A. Convert the Part A and Part B M+C county rates to risk adjusted rates (restandardizing): Go to <http://cms.hhs.gov/healthplans/rates/> and find the “aged” rescaling factor from the “M+C Monthly Capitation Rates” (same source as “A” in Step 1) for a beneficiary living in Howard County, Maryland.
- Part A: \$348.93 + Part B: \$281.71 = \$630.64
 - Rescaling factor = 1.039373
 - \$630.64 x **1.039373** = **\$655.47**
- B. Calculate the beneficiary risk factor: Go to <http://cms.hhs.gov/healthplans/rates/> and find the “Community and Institutional Annual Risk Factors for the CMS-HCC Model” (Exhibit 1—for beneficiaries with 12+ months of Medicare experience).
- Find the community factors for beneficiary described in the example:
- 72-year old female, living in the community (non-institutional), base factor = .384
 - Originally-disabled female (non-Medicaid) = .236
 - Diabetes with Acute Complications (HCC 17) = .391
 - Diabetes without Complications (HCC 19) = .200* (dropped because of hierarchy)
 - Pneumococcal Pneumonia (HCC 112) = .202
 - Add all risk adjustment factors = .384 + .236 + .391 + .202 = 1.213
 - Beneficiary risk factor = **1.213**
- *The .200 factor for a diagnosis of Diabetes without Complications (HCC 19) is dropped because both HCC 17 and HCC 19 are in the diabetes hierarchy. HCC 17 represents the more severe manifestation of diabetes.
- C. Calculate 100% risk adjusted monthly payment amount by multiplying the beneficiary risk factor by the risk adjusted Part A and Part B total (step “A” above)
- \$655.47 x 1.213 = **\$795.09**
 - \$795.09 is the 100% risk adjusted payment amount
- D. Multiply the total amount by the 2004 risk adjusted payment percentage (30%).
- \$795.09 x .30 = **\$238.53**

STEP 3—SUM THE DEMOGRAPHIC AND RISK ADJUSTED PAYMENT AMOUNTS TO GET THE MONTHLY M+C PAYMENT

- Demographic Payment = \$338.59
- Risk Adjusted Payment = \$238.53
- **\$338.59 + \$238.53 = \$577.12/month or \$6,925.44 annually**

ATTACHMENT A

Medicare + Choice Monthly Capitation Rates and Rescaling Factors for 2004

To determine the risk-adjusted portion of payment for 2004:

- 1) Add the Part A and Part B Aged Rates, or the Part A and Part B Disabled Rates,
- 2) Multiply by the corresponding Rescaling Factor (Aged or Disabled),
- 3) Multiply by the risk score (determined from the Risk Factor Tables in Enclosure III), and
- 4) Apply the blend percentage (30 percent for 2004).

Note: You will get the same result whether you start with Aged or Disabled Rates.

Note: The Rescaling Factors reflect an adjustment for coding intensity of (1/1.05) and an adjustment for risk adjustment budget neutrality of 1.163.

Code	State	County Name	Aged		Disabled		ESRD		Aged Rescaling Factor	Disabled Rescaling Factor

**Exhibit 1. Community and Institutional Annual Risk Factors for the CMS-HCC Model with
Constraints and Demographic/Disease Interactions**

<http://www.cms.hhs.gov/healthplans/rates/2004/cover.pdf>

USING THE REDUCED SET OF ICD-9-CM DIAGNOSIS CODES IN THE CMS-HCC MODEL

The purpose of the “Reduced Set of ICD-9-CM Diagnosis Codes” is to provide M+C organizations with a complete list of codes that are in the CMS-HCC model and are used for the calculation of enrollee risk scores. The submission of correct ICD-9-CM codes is critical to accurate risk adjusted payment.

In March 2002, CMS provided two code lists:

1. Every ICD-9-CM code that supported an HCC/disease group in the CMS-HCC model.
2. A reduced set of codes that indicated when a 4th and 5th-digit ICD-9-CM code defaulted to a 3-digit code because the more specific code (4th & 5th-digit) did not change the HCC designation.

- **THE PRIMARY USE OF THE REDUCED SET OF CODES IS TO DEVELOP SUPERBILLS FOR DATA COLLECTION USE BY PHYSICIANS.**
- **THE REDUCED SET OF CODES MUST NOT BE USED AS A DATA SUBMISSION EDITING TOOL.**
- **Once an ICD-9-CM code is stored in the RAPS database, the Risk Adjustment System (RAS) runs the CMS-HCC model and systematically determines the appropriate HCC based on the ICD-9-CM code. For example, if code 038.41 is submitted and stored, then the CMS-HCC model maps 038.41 to the appropriate HCC (HCC 2). The factor for HCC 2 is then used to calculate the beneficiary risk factor.**

Example—Improper Use of the Reduced Code Set

Monumental Health Plan collects all ICD-9 codes and then edits diagnostic data to select only CMS-HCC ICD-9-CM reduced codes. This approach is problematic.

Code submitted by physician: 410.02 AMI ANTEROLATERAL, SUBSEQ.

Plan applies editing program: The editing program only filters based on 3-digit reduced codes—in this case 410.

Problem: By filtering based on the reduced code only, the diagnosis of 410.02 is not submitted to RAPS; therefore, the beneficiary’s risk score may be affected if this service was the only one that identified the acute myocardial infarction.

Reduced Set of Codes for Risk Adjustment			
Reduced Set	ICD-9 Code	Short Description	Disease Group/HCC
410	410	ACUTE MYOCARDIAL INFARCTION	82
	4100	AMI ANTEROLATERAL WALL	82
	41000	AMI ANTEROLATERAL, UNSPEC	82
	41002	AMI ANTEROLATERAL, SUBSEQ	82

Example—Proper Use of the Reduced Code Set

Happyday Health Plan wants to help their network physicians submit accurate risk adjustment data. The plan has developed specialty-specific superbills that include all ICD-9-CM codes relevant for a specialty as well as other non-specialty codes that may impact treatment such as anemia.

Happyday designed a superbill for use by neurologists. For this specialty superbill, a 3-digit code is placed on the form with 2 spaces left blank for 4th and 5th-digit code specificity.

Superbill Code for Neurologist’s Office: 345._ _ Epilepsy

The neurologist specifies the code to the 4th-digit level: 345.2 PETIT MAL STATUS for a patient visit

Happyday receives the superbill diagnostic information via RAPS format and submits the full code (345.2) to RAPS.

Problems with the Reduced Code Set

- Providers and physicians that code only to the 3-digit level when a 4th or 5th-digit is warranted violate ICD-9-CM coding guidelines.
- Based on recent experiences, CMS believes that plans using only the reduced code set have problems with getting the ICD-9-CM code correct. That is, plans have misused the reduced code set by filtering on the 3-digit codes only and not submitting 4th and 5th-digit ICD-9-CM codes for risk adjustment.
- Per HIPAA, providers and physicians must follow ICD-9-CM coding guidelines—this prohibits coding based solely on the reduced code set.

TO AVOID THE IMPROPER USE OF THE REDUCED CODE SET, FOLLOW ICD-9-CM CODING GUIDELINES AND HAVE PROVIDERS AND PHYSICIANS CODE TO THE HIGHEST LEVEL OF SPECIFICITY FOR THE PATIENT VISIT!

FINAL – 2004 ICD-9 CODES and HCCs

Notes: ^aICD-9 codes 404.03, 404.13, and 404.93 are assigned to multiple HCCs.

Diagnosis Cluster Benchmarks

The following benchmarks are based on Medicare fee-for-service claims data. Your specific experience may vary significantly based on a number of factors.

- Health status of beneficiaries varies among counties and among health plans within counties.
- Health plans may utilize different collection and/or submission rules for different provider types or provider networks.
- Patterns of care and utilization of each of the provider types may vary between fee-for-service and M+C, as well as between various M+C organizations.

MEDICARE FEE-FOR-SERVICE BENCHMARKS

PROVIDER TYPE	TOTAL DIAGNOSES		MODEL DIAGNOSES		UNIQUE MODEL DX	
	NUMBER	PERCENT	NUMBER	PERCENT	NUMBER	PERCENT
PHYSICIAN	40	83.3%	12.2	85.3%	2.2	66.7%
HOSPITAL OUTPATIENT	6	12.5%	1.3	9.1%	0.4	12.1%
HOSPITAL INPATIENT	2	4.2%	0.8	5.6%	0.7	21.2%
TOTAL	48	100.0%	14.3	100.0%	3.3*	100.0%

*Unique diagnoses were not unduplicated across provider types.

Benchmark Analysis

The majority of the diagnoses come from the physician office setting, but many of these diagnoses are not in the model. Only one in four physician diagnoses is part of the CMS-HCC model. By comparison, nearly half of the inpatient diagnoses are part of the model. Also, a much higher percentage of model diagnoses are unique in the inpatient hospital setting as compared with the physician office.

We estimate that the diagnoses from the physician setting are the result of approximately 20 physician office visits per beneficiary. The inpatient diagnoses result from approximately .35 discharges per beneficiary. Therefore, when viewed in terms of visits, one hospital stay results in two unique model diagnoses, while twenty physician office visits result in 2.2 unique diagnoses. It is clearly most critical that plans capture every inpatient stay and submit the diagnoses from each stay. By contrast, missing one physician office visit is unlikely to have a major, if any, impact on risk adjustment.

Utilizing the Benchmarks

To utilize the benchmarks, M+C organizations must first analyze how they submit data, e.g., all diagnoses, only those diagnoses that are in the model. Knowing the submission criteria will steer the submitter to the appropriate column in the table above. To compare to the fee-for-service benchmarks, other considerations include comparative utilization of services (e.g., does an organization use more ambulatory surgical centers than hospital outpatient services) and comparative health status of the counties in the organization's service area.

-  The simplest way to utilize the benchmarks is to compare the ratios of the various provider types. Regardless of utilization patterns and submission criteria, the majority of all diagnoses will come from physician data.

JULY 28 2003

TO: Medicare+Choice (M+C) Organizations, Medicare Capitated Demonstrations, and Selected Specialty Plans

SUBJECT: Risk Adjustment Model Output Report Available for 2004 -- **ACTION**

You recently received a letter describing changes to the Monthly Membership Report (MMR) for 2004, dated 6/19/2003. The purpose of this letter is to provide details regarding an additional monthly report that organizations will receive beginning in 2004. This new report, entitled the Risk Adjustment Model Output Report, is needed as the Centers for Medicare & Medicaid Services (CMS) implements the new risk adjustment model for 2004.

The report will provide detailed information reflecting the basis for the risk adjustment score reflected in the MMR. Risk scores are calculated using the CMS Hierarchical Condition Category (CMS-HCC) model. The report will provide detailed information on the specific disease groups (called HCCs) and disease interactions triggered for an enrollee.

The Risk Adjustment Model Output Report displays the following information:

- Enrollee identifiers (Health Insurance Claim Numbers (or HICs), name, date of birth)
- Identifies the appropriate sex and age group, as well as other demographic interactions for an individual, (if applicable);
- Reflects the specific disease groups (HCCs) triggered; and
- Reflects disease interactions.

NOTE: Disease hierarchies will not be identified separately. If a hierarchy exists, then only the most severe manifestation in the hierarchy will be displayed on the report.

Example: A beneficiary triggered HCC 7 (Metastatic Cancer and Acute Leukemia) and HCC 9 (Lymphatic, Head and Neck, Brain, and Other Major Cancers). The report will reflect HCC 7, not HCC9

This report is used in conjunction with the MMR and beneficiary-specific information (residence—community vs. institution, Medicaid status, disability, etc.) to verify risk scores.

Accessing the Report in GROUCH

The report will be available in GROUCH and can be downloaded in the same manner as your MMR. A formatted report and flat file versions will be available. See the attached layouts. After you connect to the CMS Data Center, press ENTER, select 1 – TSO from the CMS Application Menu screen, login and proceed as follows.

- At the ISPF Primary Option Menu, enter TSO GROUCH on the command line of the ISPF menu and press **ENTER** twice.

- At the GROUCH Report menu screen, type a T to the left of the RA MODEL OUTPUT and press the **ENTER** key.
- Go the TSO READY prompt by pressing F3 or enter =x on the command line of the ISPF menu.
- Click on RECEIVE FILES FROM HOST icon on the left side of the tool bar.
- In the HOST FILE NAME block, type (in single quotes) 'XXXX.@BGD5050.RECEIVE.DATA', XXXX = userid.
- In the PC FILE NAME block, type C:/PC FILE NAME.TXT (the name the user gives the report)
- Click on options and be sure that ASCII and CRLF are typed in the box.
- Click on OK on the FILE TRANSFER OPTIONS.
- The TRANSFER MODE Box should read TEXT.
- Click on ADD TO LIST.
- Click on the file entry in the "Transfer List".
- Click on "Receive" button.

If your organization directly downloads files without building a transmission file in GROUCH, use the following data set name:

[HKH.@BGD5050.PLNHXXXX.RMMYYYY.RAMODELR](#)

[HKH.@BGD5050.PLNHXXXX.RMMYYYY.RAMODELD](#)

HXXXX = your contract number

If you have questions regarding this report, please contact Jeff Grant at jgrant1@cms.hhs.gov.

If you have questions regarding accessing this report in GROUCH, please contact the Technical Support staff person assigned to the region where your M+C organization is located.

Regions I – III, VII Sarah Brown – 410.786.6358

Regions IV – VI Sue Hartmann – 410.786.6192

Regions VIII – X Sue Mathis – 410.786.6398

Sincerely,

/s/

Cynthia Tudor, Ph.D.

Field #	Field Name	COBOL Name	Data Type	Starting Position	Ending position	Field Length	Comment	Field Description
1	Health Insurance Claim Account Number	BENE_CAN	Char(12)	1	12	12	Also known as HICAN	This is the Health Insurance Claim Account Number (known as HICAN) identifying the primary Medicare Beneficiary under the SSA or RRB programs. The HICAN consist of Beneficiary Claim Number (BENE_CAN_NUM) along with the Beneficiary Identification Code (BIC_CD) uniquely identifies a Medicare Beneficiary. For the RRB program, the claim account number is a 12 bytes account number.
2	Beneficiary Last Name	BENE_LST_NM	Char(12)	13	24	12	First 12 bytes of the Bene last name	Beneficiary Last Name
3	Beneficiary First Name	BENE_1ST_NM	Char(7)	25	31	7	First 7 bytes of the bene first name	Beneficiary First Name
4	Beneficiary Initial	BENE_INIT	Char(1)	32	32	1	1 byte initial	Beneficiary Initial
5	Date of Birth	BENE_DOB	Char(8)	33	40	8	Format as yyyymmdd	The date of birth of the Medicare Beneficiary
6	Sex	BENE_SEX	Char(1)	41	41	1	0=unknown, 1=male, 2=female	Represents the sex of the Medicare Beneficiary. Examples include Male and Female.
7	Social Security Number	BENE_SSN	Char(9)	42	50	9	Also known as SSN_NUM	The beneficiary's current identification number that was assigned by the Social Security Administration.
